- Questions

Introductions

- Colin
- Tristan
- Ashley

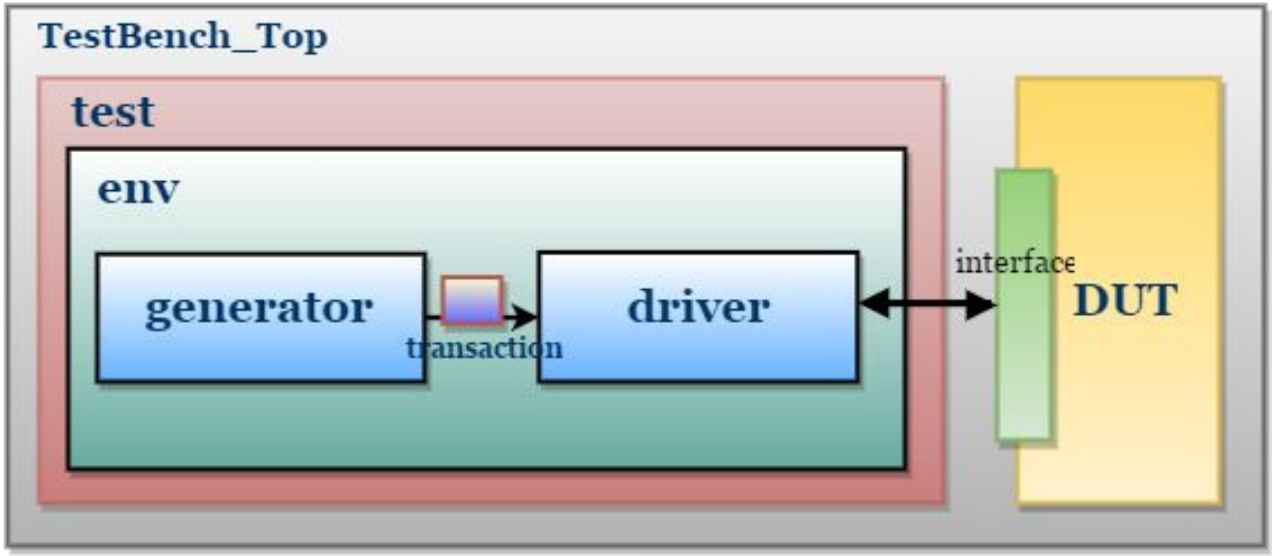

Questions: clever archs?

- What is the 'thorniest' problem you have ever seen solved in a S-M software architecture?

Questions: test?

- What testing strategies have you applied to Shlaer-Mellor application testing?
- What is the role of software architecture in application testing?

Questions: orphaned IP?

Many institutions develop high security and even top secret applications. These efforts are managed behind firewalls (e.g. green net / red net, high side / low side) resulting in intellectual property isolated from shared usage. Much of this IP (namely software architectures) need *not* be secret.

What can be done to free this IP into the OSS community?

Questions: mistake?

What is the biggest blunder/regret you made in a software architecture?

Questions: peanut gallery?
