-
- New xtUML defined “product”
 - Using xtUML to define interfaces of Sw components.
 - Generating definition for transport layer instantiation.
 - Generating bridge between transport layer and xtUML component (model and source code)
 - xtUML component may be model or used defined
 - Users understand separation of functionality and architecture
 - Models are very explicit
 - Existing xtUML defined “product”
 - Porting from domain to component and interface usage
 - Both project specific and generic domains exist
 - Existing bridges have actions defined, impacts the portability
 - System view is now visible
 - MC issues
